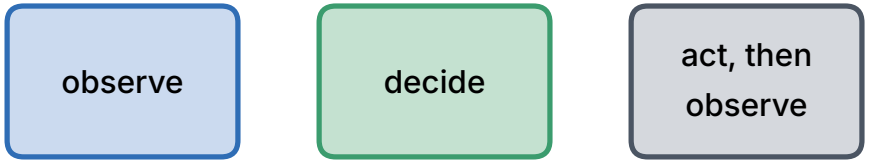
1 · Extract, then decide

The LLM turns messy input into fields; Jev decides.

2 · The decide step

Every small choice inside an agent loop goes to Jev.



3 · Guardrail gate

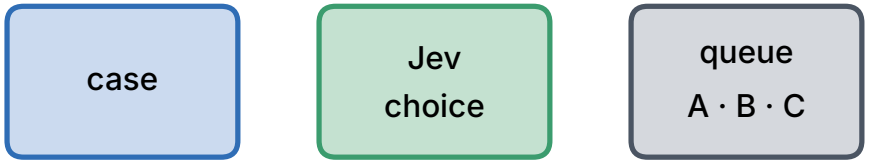
Before an action runs, a typed check on trusted facts.

4 · Check the writer

The LLM writes; Jev checks it; low scores escalate.

5 · Router

A choice sends each case to the right queue, or to a person.



6 · Memory controller

Decide what to store, fetch and forget.
