| | |
|---|---|
| ✓ **Pinned** | a dated model name, not an alias; the SDK version in the lockfile |
| ✓ **Versioned** | calibration, thresholds and rules in one config, with a fingerprint on every record |
| ✓ **Fail-safe** | every error has a decided meaning; test it by making calls fail |
| ✓ **Logged** | state, answers, probabilities, zone and reason for every decision |
| ✓ **Audited** | a random share of auto-closed cases goes to a person |
| ✓ **Monitored** | zone rates, queue, fallback rate, predicted against confirmed, every day |
| ✓ **Shadowed** | each new version runs silently beside the current one first |
| ✓ **Owned** | a named person reads the flags and can switch the service to review-everything |
