

I

We learned to speak in probabilities, make them honest and turn them into actions.

II

Networks learned patterns, LLMs learned to write, and agents to act.

III

A new kind of model decided in one pass, with probabilities we could test.

IV

We compared methods, drew lines from costs and named the patterns.

V

We built it: calls, an agent, a case study, our own model, a service.

VI

Now decisions are cheap. The question is which ones deserve them.
