

I

We learned to speak in probabilities, and to make them honest.

II

Networks learned patterns, and got overconfident at scale.

III

LLMs learned to write, and agents to act, one token at a time.

IV

A new kind of model decided in one pass, with probabilities we could test.

V

We drew lines from costs, and named the patterns.

VI

We built it: calls, agents, a case study, our own model, a service.

VII

Now decisions are cheap. The question is which ones deserve them.
