

What changes now

1 A new layer in the stack

Writers write, deciders decide, policies act. Each layer is smaller, testable and replaceable.

2 Decisions get cheap

One illustrative agent task: 13 s with an LLM deciding, 8 s with a decision model.

3 Judgement gets valuable

Costs, lines, calibration checks and queues: the skills that decide whether cheap decisions are good ones.

4 Much is still unknown

Calibration on your data, drift between versions, prices, regulation. Each is testable or plannable.

5 Start on Monday

Audit your decisions. Measure one. Shadow it. Switch it on with a fail-safe and a monitor.

6 The story

Rules weren't enough, so we learned from data. Now we can decide cheaply, so we must decide well.
