

Does Jev's calibration hold on data like yours?

Chapter 11 tells you how to find out.

How fast do System One models improve, and do they drift between versions?

Pin versions; re-test.

Will prices stay this low?

Early-access prices change. Chapter 12's model shows what depends on it.

Who else builds decision models?

The interface pattern outlives any one vendor.

How will rules on automated decisions evolve?

Keep people deciding where stakes are high.
