

**"Jev returns calibrated
probabilities"**
the vendor

**"Jev can't be calibrated
for your data"**
a critic

test it on your labels

```
graph TD; A["Jev returns calibrated probabilities<br/>the vendor"] --> C[test it on your labels]; B["Jev can't be calibrated for your data<br/>a critic"] --> C;
```

The diagram consists of three rounded rectangular boxes. Two boxes at the top point towards a single box at the bottom. The left box is orange and contains the text 'Jev returns calibrated probabilities' in bold, with 'the vendor' below it. The right box is pink and contains the text 'Jev can't be calibrated for your data' in bold, with 'a critic' below it. The bottom box is green and contains the text 'test it on your labels' in bold. Arrows point from the bottom of each top box to the top of the bottom box.
